## P R E F A C E

---

The late Lawrence B. Romaine, book dealer and compiler of A guide to American trade catalogs, 1744-1900 (1960), sold the Wm. H. Carr & Co. catalog to the Longwood Library — soon to become the Eleutherian Mills Historical Library — in 1959 for \$35.00. Romaine had convinced the Library of the reference value of such publications and did much to build the foundations of the present collection of over 7,000 items. Researchers at the Library use trade catalogs to discover and describe the products of different regional firms. Price information, when included, adds an important research dimension for students. In more general terms, trade catalogs are used to document the level of technological sophistication at various times and places. Anyone who has read the Early American Industries Association's Chronicle knows the value of trade catalogs to identify and to illustrate tools, machines, and other objects under study.

Romaine recognized the particular worth of the Wm. H. Carr & Co. catalog by devoting two pages to its description and analysis in his Guide. In format, the catalog falls between the early 19th century advertising broadside and the later illustrated catalog. The most valuable characteristic of this work is the concentration on American products and the listing of firms that made them. Over fifty-nine companies are represented in the wholesaler's publication. Remarkable as this record is, the catalog has distinct drawbacks. The most obvious is the lack of illustrative matter of any kind. Secondly, there are no addresses for the firms listed. (Using the Romaine

Guidé, only nine of fifty-nine firms can be located.) Finally, only the tools of Douglas Axe Manufacturing Company of East Douglas, Massachusetts, are priced.

Despite the limitations of the Carr catalog, it should prove useful to those who wish to identify tools or to prove that certain products were American made by 1838. Beyond specific tools -- "Yankee" or "Kentucky" axes and "Pennsylvania" or "New Jersey" scythes, for instance -- the reader will notice the sale in bulk of various items destined to be part of larger products. American industry had matured sufficiently for firms to specialize in rifle and gun barrels, shutter fasteners, window springs and hardware, door locks, axles, lifting screws, coach hinges, and carriage steps. The Carr catalog seems to be dominated by supplies for house construction, shoemaking, carriage building, and farming. Also important to note was the availability of ready-made machines and other mechanical devices such as surveyors' instruments, leather-splitting machines, coffee grinders, pumps, platform scales, portable blacksmith bellows and forges, and six hole mousetraps.

Richmond D. Williams,  
Director,  
Eleutherian Mills Historical Library
